

Project Change Summary

1. Improve PDF / DOC / Markdown File Viewer

Status: Low Priority  (Can be implemented)

- Improve the PDF, DOC, and Markdown file viewer to provide a better user experience.
-

2. Store Uploaded Files in MinIO (S3 Compatible)

Status: Low Priority  (Can be implemented)

- Store uploaded files in MinIO instead of local storage to simplify future migration to Amazon S3.
-

3. Add Logging for Each Step

Status: Low Priority  (Can be implemented)

- Implement proper logging across the complete request flow, as logging is currently not well maintained.
-

4. Remove Customer Entry from User Table

Status:  Not Recommended

- This change is not suitable for the existing multi-tenant architecture. Removing the customer mapping may impact authentication, authorization, and data isolation.
-

5. Redis Storage Enhancement

Status:  High Priority (Major Change)

Existing:

- Redis currently stores basic Question/Answer cache.

New Requirement:

- Store Answer, Token Usage, Sources, and Cache Metadata.
 - Store only the last 30 questions and use them as context when regenerating AI responses.
-

6. Upload Documents with SME Tags

Status: Low Priority  (Can be implemented)

- Store SME tags during document upload and save them in the database.
-

7. Prefer Documents Based on SME Tags

Status: Low Priority  (Can be implemented)

- Identify relevant tags from the user's question and prioritize documents with matching tags before searching other documents.
-

8. Semantic Cache Changes

Status: Pending Client Discussion

- Using `client + user_id` in the semantic cache does not appear necessary.
 - The 7-day data retention policy should be finalized after discussion with the client.
-

9. Combine Chat Messages and Conversations Table

Status:  Not Recommended

- The existing normalized database design is more scalable and maintainable. Merging both tables may introduce data duplication and maintenance challenges.
-

10. Add Document Name in Embeddings Table

Status:  Not Recommended

- Storing `document_name` in the embeddings table will create duplicate data. The existing design using `document_id` is more efficient and normalized.
-

11. Add Header, Footer & Left Sidebar (Frontend)

Status: Low Priority  (Can be implemented)

- Improve the frontend layout by adding a header, footer, and left navigation sidebar.
-

12. Reduce Chunk Size & Chunk Overlap

Status:  High Priority (Major Change)

Existing:

- `chunk_size` (1000) and `chunk_overlap` (200) are fixed and hardcoded.

New Requirement:

- Make chunk size and chunk overlap dynamic based on the uploaded document size and content.
-

13. Reduce Prompt Size & Make it Dynamic

Status: Pending Client Discussion

- The prompt strategy should be finalized after understanding the client's document types and business requirements.
-

14. Move Credentials to `.env` / Config

Status:  Already Completed

- All hardcoded credentials have already been moved to `.env` and configuration files.
-

15. Maintain Alembic Versions Properly

Status:  Already Completed

- Alembic migrations are already properly maintained and upgraded to the latest head version.
